CLIPS, QUOTES, & COMMENTS, a bi-weekly, is issued on the first and fifteenth of each month by the Borderland Sciences Research Associates; 3524 Adams Ave., San Diego 16, California. Contains only short articles & miscellaneous material supplementary to the BSR bi-monthly ROUND ROBIN. ----- Prices: 12 issues (6 months) for $5.00; six issues (3 mos.) for $2.50; 2 issues-$1.00. Sample copy on request.-Most back issues available.

Meade Layne, M.A., Editor & BSR Director. Margaret V. Locke -- Associate Editor. Kathleen Banks Book-keeper.

HIDDEN TREASURE DISCOVERED BY DOWSERS: - by Capt. Du Gars: The Borderline Sciences Review, Hdqrs., "Vancosy", Nairdwood Lane, Prestwood, Bucks, - "Psychic News" Bookshop, 140, High Holborn, London W.C.1, Eng.- --- in the U.S. order from: John L. Albers, 308, 14th Ave., Sterling, Ill. --

The fact that all substances radiate "emanations", or rather, create in their vicinity a field peculiar to a substance, will attract many people to the idea of SEARCHING for hidden treasure. In actual practice, the radiesthetic emanations have often been employed for this purpose in many parts of the world with very satisfactory results.

The art of divining has been developed to a large extent in many interesting fields of research, and in England there is an Association known as the British Radiesthesia Association, which has many members who study this entrancing science. For the purpose of proving to the public the claims of the French Radiesthesists, a Hidden Treasure Hunt was recently organized by the proprietors of an enterprising newspaper, and an ingot of gold, weighing 25 pounds, was hidden in a seven-acre park in the Forest of Saint Germain, not far from Paris. It should be noted that the ingot was LENT by the Bank of France, for the purpose, which meant that findings were definitely NOT keepings.

A party of eight dowsers set out, each with his own particular divining rod or pendulum, in the hope of finding the hidden ingot of Gold. Each chose his own point of departure, and each worked independently of the others. Within the space of one hour, one of the eight dowsers located the spot where the treasure was hidden. The maximum and minimum estimates of depth were six feet and two feet six inches respectively.

The test achieved its aim among the readers of the newspaper and I think there is no doubt that radiesthesia could be used far more often in the search for gold and treasure, not to mention, of course, the radioactive minerals so often required and so highly valuable in these days of atomic research.

(The above B.S.R. is a quarterly.-Annual subscription, 10/-; single copies 2/6d.) - (-Spring edition-.)

DEFENDER Bulletin: Wichita, Kansas. Under date line of July 2, 1956 this strong and combative organization comes to grips with the Cut-and-Collect gang, also known as the OCTOPUS, the A.M.A. and other less printable titles: We quote, psasim:

"The anti-cancer crusade in which we are engaged is important because millions of human lives are at stake ... If enemies succeed in destroying the Hoxsey treatment, it will be the equivalent to wiping out all hope of relief for cancer sufferers. This is the most important issue confronting our Country today.

Surgery, X-ray and radium have proved futile, and only add to the suffering of the victim. Doctors who cut and burn and collect, knowing that their system offers no hope, are the real quacks. They stand to lose enormous sums of money when the Hoxsey cure gains general acceptance ...

During the trial at Dallas in May, Julian Hyer, attorney for the Board of Medical Examiners, said these words in open court: WE DO NOT DENY THAT THEY CURE CANCER OUT THERE AT THE CLINIC. (This is characteristic of the brazen and indecent effrontery of the cut-'n-collect companionship. ml).

There are thousands of completely documented case histories, demonstrating cures of both internal and external cancer by the Hoxsey method. Some date back more than a quarter of a century. The Clinic does everything possible to cure every

case that comes. Unfortunately, they lose some. Sometimes the patient does not cooperate ... also many are so mutilated and burned that it is simply too late ... there are those whose time has come, to go.

If we fail in this crusade, it is probable that the treatment will be lost to mankind. The enemies possess great power and inexhaustible sums of money. They are organized. Our hope is the distribution of pamphlets - millions of pamphlets. We have set as a goal the immediate circulation of 10,000,000 pamphlets. With this accomplished trend will become a fixed fact and the treatment will be saved. . . It is just a matter of getting ten million Hoxsey pamphlets into good hands across the nation.

We have the facilities and distributors ready and waiting - carefully organized. We only need the money to start things rolling on a nation-wide scale... Packages are being made up daily, each containing 14 pieces of carefully prepared literature. At this writing we are holding 16,000 requests for these packages. When you send your offering, include the names of persons whom you know have cancer, so we can mail packages to them (your name will not be mentioned) ... With us, this is a religious ministry.

We are asking friends to average $5.00 apiece as nearly as possible. Give more if you can, because many will have to send less. . .

There are numerous instances of our literature having saved lives. Cancer victims given up to die have read DEFENDER pamphlets, gone to Dallas, and are today sound and well . . ."

- - - - - - - - - - - - -

(signed) Gerald B. Winrod."

One comment might be, that the American people can get rid of the AMA any time they want to - by the simple process of asking any and every physician: Do you be-belong to the AMA - and if so, WHY? Then, if his answer is 'yes', tell him: In that case I do not want your services'.

About one month of this would be enough - but of course it is only a happy dream, because of the ignorance and indifference of the public.

As to Defender magazine, BSR has repeatedly commended it, not for its religion or its politics, but for its long and courageous struggle on behalf of such near-lost causes as the Koch, Hoxsey, Lincoln, Gerson, Drosnes-Lazenby, and Krebiozen treatments for cancer. All these have been and are doors of hope for humanity - but slammed shut by those who should be first to hold them wide.

And WHY? This is a distressing thing to say - but - it costs about $10,000 (or what have you?) to die of cancer in the United States - and if there are, say, about a million current cases - well, how much is a million times $10,000 - as a permanent backlog of organized medicine? Or are we asking too much, to hope that greed should make sacrifice for the sake of humanity? But not to generalize too far, we honor many honest and selfless followers of the Hippocratic rule.

It is true - and fortunate - that Dr. Hoxsey is a wealthy man, and The Defender is not without resources. But this does not relieve each of us of personal responsibility, since they are contending with a public, not a private enemy, and the struggle is one of life and death, and weighted with significance for every living person. For this excellent reason the BSR Director urges you to send to Defender, Wichita, Kansas, the names and addresses of persons known to you who are afflicted with cancer, your own name and address, your request for the package of pamphlets - and whatever sum of money you feel able and have the impulse to con - tribute. And never mind whether you do or do not like Defender magazine - it is carrying on a courageous campaign against a very great iniquity.

ML

"MAP DIVINING FOR WATER, MINERALS AND OIL": "The Method of Divining":

"My method is this. I ask to be given a Government survey map (not topographical) of one inch to one mile. The map is approximately 27 inches by 27 inches.This is the usual size of Government survey maps in most countries so they can be ob - tained nearly everywhere.

"I do not study the map and do all preliminary work with closed eyes. This necessitates having an 'Observer' who must listen to all I say (I have taught myself to think aloud) and notice where I get the strongest reactions. I start by rubbing my hands over the map until it turns from a piece of dead paper into something alive , like a piece of the earth. I get the same sensations and shocks from a map as I do from the actual ground. Every mineral gives me its own special sensation and shock.

"Sometimes the map becomes alive instantaneously, irrespective of distance and with complete disregard of space and time; but at others I seem to meet a curious barrier or antagonism and the map remains dead, and it takes great determination and concentration to make my contact with the area, but once this is made I have no further trouble.

"I start the actual work by rubbing my fingers over a small area and waiting. If it is an oil map, for instance, and my hands rest immobile, I know there is no oil there. Immediately my hands are over oil they start to rise alternately, like sails on a wind-mill.

"Where the oil is very rich, my arms and hands are thrown back with such force that were I not what is called 'double-jointed' I think my arms would be forced out of their sockets. Again all this is done by feel with my eyes shut. One can only work for about half an hour at a time on an oil map. It is an extremely exhausting performance.

"The Observer then takes the maps and numbers the areas according to the violence of my reactions, and lightly pencils in my remarks. Next I take a small pendulum of heavy wood about the size of an acorn, and swing it over the rich spots and it outlines these for me, and I outline them in pencil. These areas are subsequently much enlarged, and the perimeters of the oil fields (rich spots) carefully drawn in detail. The faults, intrusions, etc., are also added with the same degree o f accuracy.

"A water map is much less exhausting to do and needs a different technique. After 'tuning in' my map, i.e., making it alive, I ask 'It' (whatever 'It' may be) questions and instruct 'It' to tell me where the water-sheds are. Again, I only use a survey, and not a topographical map, but if there are any hills or mountains from which the streams are coming, a strong draft comes up off the map and lifts my hand onto the high land, after which my hand floats gently over the map showing me the direction of the streams from the water-shed.

"The little pendulum then outlines the course of the underground streams with the most minute accuracy and I darw them in. Before the map is finished the depth must be added to each stream and a test made for the potability of the water. . .."

(The foregoing paragraphs form one section of an article by Evelyn M. Penrose, appearing in World Science Review; 11 Eaton Place, London S.W. 1, Eng. -- issue of April, 1956.)

THE U.F.O. ANNUAL. Edited by M. K. Jessup: explorer and instructor in Astronomy, University of Michigan and Drake University. Independent research in Mayan and Inca antiquities, and in Peru, Easter Island and the Orient. Author of The Case for the UFO (1955) and The Expanding Case for the UFO. This book is a resume' of UFO and related phenomena, ar - ranged chronologically by months for the year 1955. Illustrations and appendix. Published by Citadel Press, 222 - 5th Ave., New York 3, N.Y. 375 pages; $4.95

Press notices of this book have been very favorable; it is of great current interest as well as historical value, and the most comprehen - sive summary so far published. In lieu of further comments I make a few brief quotations:

. . ."Another pattern relates to disappearing and crashing planes. Jets are taking a real beating - bombers, fighters, transports. They disappear practically at the end of runways; they explode in the air; they crash on mountain sides; and if we can believe the reports that come to us are being kidnapped right out of the air by marauding UFO... Your editor is not as convinced of the malicious intent of the UFO as are Major Keyhoe and H.T. Wilkins. Nevertheless there have been some surprising incidents which give good ground for suspicion. . . (97)

"It is their casualness which has made the UFO so puzzling. They live and move in space with the same ease and facility as birds in the air and fish in the sea. These casual movements, appearance and dis- appearance, have been observed for hundreds of years. (98). . . The Palomar telescope shows literally billions of stars. If only one star in twenty has planets, that still comes to several hundred million sol- ar systems. And if only one solar system in twenty bears intelligent life, that still makes five million intelligent races. (208). . . . Soviet Russia takes interplanetary communications so seriously that the Academy of Sciences has created a permanent commission (to deal with all related problems) (239). . .

"Despite the platitudes of mediums and fiction writers there is no evidence that the flying saucers are controlled by benevolent "masters" from Venus, Mars, Jupiter or Saturn, coming to warn us mis - erable earthlings against the woeful effects of atomic explosions. In- deed all things point to the flying saucers being rather severe with those who fly too close to them, and rather too fond of abducting whole crews of transport planes, small sea-going vessels, and inhabi- tants of tiny Eskimo villages. (370) . . .

"The evidence of both remote control and innate intelligence is overhwelming. Your editor is inclined to think that these entities or the parent craft from which they come may have their habitat act- ually in open space, or "outer space". (374). . . We do believe that the UFO are creatures - both born and constructed - of our earth-moon system . . . but there is much to learn (375) . . . It is a very common mistake to assume that one single explanation will cover all observed UFO. At least two basic types must be contemplated; one of them 'constructed' and one of them 'natural'. Some UFO's are born, some are made. (374).

. (We cannot let this paragraph pass without comment, since the . BSR publications have been saying about the same thing for nearly a decade. But to talk about people inhabiting 'outer space' makes no sense at all, unless or until we understand that space is not nothingness. Space equates with the ethers, and the ethers are finer or 'superior' grades of matter, with properties sui generis. The concept of the ether is returning to physics full force. It identifies with that of a primal cosmic energy. It is the postulate of Levantier and Lewetzow that this 'energy-stuff' exists and is available.

(This postulate is pro tem. unprovable - but it is a logical necessity. This ether-stuff is amenable to the energy of thought -so the enormous etheric craft are first of all thought into existence. So too is the equipment which they use - and they use it for convenience, just as we use all kinds of machines and devices. And the ether being a kind of living stuff, and shaped by mind or life-energy, the huge craft are in a real sense living things. On their own planes of existence they do not retain visible and tangible form which our senses can detect - but are material, real and tangible on their own vibratory levels.

(They do not'cross space', but emerge on whatever frequency they wish to operate. They 'move' about as centers of force - of living force. It is true that these craft are both born and constructed, as Professor Jessup believes - and that there is no single and simple formula for describing all of them.

(At least, so the BSRA have been saying for some years past - deriving basic ideas from sources we have confidence in, but appealing only to science and 'enlightened common sense'. Little by little,men like Jessup and Arthur Constance and many others are beginning to say the same or very similar things, in their forms of expression. We have the right to point out this fact, in the common interest - but we do NOT claim that they are under obligation or follow clues and guidance from us - or that our own information is more than partial and scanty and difficult. All this knowledge, I think, is only the first gradual diffusion of the light of dawn). ml

A VOICE FROM THE GALLERY: A mimeo. publication, up to six pages, issued at irregular intervals, by Ralph M. Holland; 2520 - 4th St., Cuyahoga Falls, Ohio. "For free distribution among certain friends interested in the by-paths which the VOICE travells. Supports no special cause or thesis. The current "summer issue" is admirably composed and full of interest. It includes:

> The Mystery of the Joyita -- The Alaska Mental Health Bill -- American's Concentration Camps -- (They Knew too Much, etc.- a book review -- Flying Saucers Uncensored (book review) -- Crazy Weather -- Poisoned Foods.

The comments on the A.T. Wilkins book (F.S.U. sup.) include several paragraphs on the 'Mat and Demat' theory of the aeroforms ('Saucers) - "first postulated by the Borderland Sciences Research Associates" some ten years ago, but here considered for the first time in a regularly published book" (Note: Gray Barker and several English critics have discussed it. ml). Editor Holland's entire comment is very favorable to this "etheric" interpretation, and we recommend this issue of VOICE for its clear presentation. Send stamped and addressed envelopes, or postage stamps if requesting free copy.-(please send to R.M.H. at addr. given above-).

"FOR YOUR INFORMATION": -- Flying Saucer Investigation in the Antipodes --

"There are two organizations in Australia: The Australian Flying Saucer Research Society of 22 Northcote St., Kilburn, South Australia. To our mind this is the most energetic group in the Southern Hemisphere - they publish a well got up quarterly --Australian Saucer Record" (available through Markham House.) This organization may be said to have replaced the former Australian F.S. Bureau of Fairfield, N.S.W.-

"There is an Australian F.S. Investigation Committee, of G.P.O. Box 578, Melbourne, Victoria, which did at one time exist. Whether it still does so is a matter for conjecture.

"In Tasmania there is the Interplanetary Research Group of 357 Argyle St., Hobart, who are stated, presumably on good authority, to publish a quarterly review. Efforts to extract copies from them having failed, the question must be left open.

"In New Zealand there are no fewer than six organizations. Two of them are in Auckland --The Civilian Saucer Investigation of P.O. Box 1914 which is stated to have a quarterly called: 'Flying Saucers'. Here again the information is second-hand, but may well be correct. -- Another F.S. Investigation Club, 21 Maungakeikei Avenue, One Tree Hill.

"In Christchurch there is the New Zealand Interplanetary Society of 55 Tedder Ave.-

"In Dunedin there is a branch of the Civilian Saucer Investigation at 860 Cumberland St.

"Hamilton boasts two groups, both in the Claudeland districts. They are the F.S. Investigation of 10 James St., ; and the Hamilton F.S. Investigation Society of 164 River Road." ("URANUS" -- bi-monthly publication, page 115, June 1956 issue.--E. Biddle, editor. Published by: Markham House Press, Ltd., 31 King's Road, London S.W. 3, England. -- Price- .35 per issue, or 6 issues for $1.50.)

SECRET EMPIRE:

Mr. James W. Moseley, in the latest issue of his Saucer News (June-July, 1956) expounds his theory that the"Saucers, or most of them, are manufactured and sent forth by a powerful'Organization' operating from underground caverns in the Southwest - the basic idea being to neutralize a threatened world disaster from atomic fall-out. So far as the idea of a 'secret organization' goes, editor George Hunt Williamson (in Telonic Research Bulletin for July-Sept., 1956) offers something similar. There is said to be a secret empire of 'international bankers' superior to all governments; and this hierarchy of evil powers is determined to keep secret the new science which the people of the Discs would offer us. The reason is obvious on brief reflection. The new knowledge involves the existence and availability of unlimited supplies of cosmic energy - and this in turn spells the end of all the vast monopolies of power, production, and distribution. Editor Williamson believes that editor Gray Barker holds a similar view.

With reference to the last point, about the destruction of power monopolies - and consequent reorganization of the whole vast network of our social and economic life - I wish to point out to our Associates that the BSR publications have commented on the matter more than once, as some other publications have done also. Is anyone so simple-minded as to suppose that, left to ourselves, this tremendous transition will be peaceful, orderly, without the huge convulsions of a dying world order? Maybe - just maybe - our visitors from the Neant will be our only hope of salvaging something worth saving - as from the wreckage of atomic war. Or will they have their own hands full with the inroad of hobgoblins and Elementals?

- - - -

THE VIS VITAE, or Wonder Mineral:

Synopsis of article appearing in The British Journal of Radiesthesia: Vol. III, No. 1. Address Hon. Secretary, British Radiesthesia Assoc., London, W.C. 1, Eng. (10/ - per year).

"The following article is built on reports of experimental results, submitted by the discovererof the mineral, Mr. Frank Hill, and others. . . Photos from Mr. Hill in South Africa. The BRA submitted a specimen of the rock to the British Museum Geological Department ... which stated that a quantity of quartz was present, that the rock was not radio-active, but too weathered for true analysis.

'In a report by the Metaphysical Society of London there appears the following:

"Report on V.V. by Dr. W.E. Benham of the Metaphysical Society: Radiation ½ wave length - 1.6 centimeters. --- ½ wave length, 1.6 centimeter through glass container.
Conclusion: A most powerful source of healing, but it should be emphasized that tests so far have been limited to the laboratory measurements. These alone tell us that the mineral is in a category of a universal healer, which means that not all diseases necessarily respond, but that all human beings are likely to be benefitted, if only in general vitality, by its application.

We still have specimens of the rock in the hands of prominent geologists in several parts of the world ... the general interest has exceeded our wildest speculation. . .

"We have received a number of inquiries on how the mineral should be used, and we repeat that it can be taken in small quantities internally; it can be worn on the person, either in a sachet or in a bottle; the bottle can be stood for a few minutes in bath water, or the bottle can be placed under the pillow at night.

"Supplies of the mineral are now becoming more readily available to those who require it, and a pamphlet describing its uses can be obtained from the British Radiesthesia Association by sending a self-addressed envelope."

NOTE by CQC Editor:

We have about a teaspoonful of this mineral here at BSR Hdqrs. It looks like bits of quartz gravel, the largest pieces about half the size of a small pea, and all of it a dark rust color ... The fact that it is not radioactive does not mean that it is inactive for radiesthesia. We hope to report more fully on this singular substance. . . For the moment it reminds us of the 'immortal cell' lately discovered by naturalist J.C. Brown - a life-entity of some kind which may also possess remarkable stimulative and therapeutic values (see CQC- F-7 and CQC - F-8). It seems natural to expect that the immense development of radiesthesia will uncover unknown forces and effects - it has already done so and the possibilities seem unlimited. -- Attempts to photograph the "V.V." radiation are now under way, by means of the cosmitron camera and other apparatus; also attempts to locate mineral-bearing areas by means of map-divining.

Vol. III, No. 1 of the JOURNAL, quoted from above, also contains an article on Tracing Missing Persons (by radiesthesia); an article on Sleep; A Question of Vitality; New Advances in Radiesthesia (these are four separate articles, several pages in length, and a section of book announcements and short reviews. There is also a Directory of Practitioners in radiesthesia (England, New Zealand, South Africa, West Africa).

PLEASE NOTE: The next issue of CLIPS, QUOTES, & COMMENTS will be August 1 . 1956.

Tokyo (UP):"'Nightmare' Disease Fatal to 200 In Tokyo -- A Japanese physician has reported the deaths of 200 young persons in Tokyo from an unknown ailment similar to the fatal 'nightmare' disease in the Philippines, it was disclosed today.

"Dr. Saburo Yoshimura, of the Tokyo Metropolitan Health Bureau, told a meeting of doctors that 60 persons died in 1954, another 60 in 1955 and 80 so far this year from the mysterious illness.

"'I gather that nationwide the deaths must total several hundred this year,' Yoshimura said. He said autopsies have given no clue to the illness because other than a 'relaxed' state of the heart tissue and heavy accumulation of blood in the heart, no other abnormal complications could be seen. 'Acute symptoms similar to a person dying from a heart attack were not found,' he said.

"Yoshimura said a feature of the illness was that the victims mostly w e r e healthy men between 20 and 30 who were in high spirits up to the time they went to bed and died." (Cr. E.S.S., Buffalo, N.Y.)

WASHINGTON (AP): (by Frank Carey) "Experts Tell of Danger In Radiation -- Recommendation made by the National Academy of Sciences recently in its report on the real and potential hazards of radiation:

"The report said radiation -- at least in relatively large amounts -- could cause 'premature aging'. Also, that in sufficient quantities and under certain conditions it can cause such things as cancer.

"And it said that ANY amount of radiation, however small, if received in a person's sex glands, produces genetic changes that might result in mentally or physically defective children in some future generation.

"The idea is: the more radiation, the more 'mutations'; and the more people exposed, the greater the extent of damage to future generations, even though widespread effects on the world's population as a whole -- as distinguished from many individual defectives -- might not be recognizable for centuries.

"The Academy made this recommendation:

"That limits be set on the average amount of radiation Americans can received in their reproductive glands -- especially from conception to age 30, the critical period for reproduction of the species.

"And, as an aid in keeping tabs on how much radiation each person is receiving -- whether from atomic bomb tests, nuclear power plants, medical X-rays, cosmic rays in the atmosphere, or naturally radioactive materials in the ground -- the Academy recommended:

"That some kind of a national system be set up to keep a record of every American's cumulative exposure to radiation -- from the cradle to the grave.

"One of the key scientists involved in the Academy's report -- Dr. Warren Weaver of the Rockefeller Foundation -- sees the possibility of everyone wearing a 'little film slip' which would record exposure to the invisible rays of this atomic age."

THE YADA DI SHI'ITE: Mediumship of Mark Probert.

"Regardless of statements made to the BSR Director and his physical reactions to information concerning the nature of these beings ('space people, etherians') they are not as horrible as some of them may seem due to their unusual form. It is true that many of them are not of man-form; also, being of a much higher mentation they are without our state of emotional responses. They are no more likely to react to what man may call good and evil, than man would consider what an insect might feel on the same subject. Nevertheless, these beings have no evil intent * on man or the earth. Had they had such, they could have taken over or destroyed the earth long ages ago. It is also true that the Ethereans have in the past taken large groups as well as individuals from the earth and transplanted them on other bodies in space, both in and out of your solar system, and it is likely that they will continue to do this from time to time. . .

People have often asked us why these space beings need to have a body such as the Discs and other forms? Can they not move about without the use of machines if they are really space beings? This is best abswered by another question: Man himself is a space being; why does he have to find a form to move about in? Both man and the Etherians are purely mental beings, and as such are everywhere in consciousness, which IS space. But the phenomena of life necessitate form building. All forms are made up of varying degrees of universal life energy, and are but manifestations of the same. The Etherèans desiring you to know of their presence, must create form so that you can become aware of them through the measuring rods called the physical senses. Anyway, earth man need have no fear of these beings unless they attack them or get too nosey - then it is quite likely they will retaliate in a like manner.

(end of quote)

Questioned at a later date about the incursion of "Elementals" and uncouth goblin-like shapes reported from various parts of the world, the Yada said that the earth and in fact the whole solar system was entering 'a different area of ether-density' - different vibration frequencies or 'pressures'. Life in innumerable forms is to be found everywhere on these planes or frequencies, and the 'borders of manifestation' are lowered by the changed conditions. Beings of the Elemental and Devic evolution now find access to the earth-plane (vibratory frequencies) easier than before. Such beings are seldom malicious but are often frightening, and their sense of humor does not appeal to us . . .
